Campanula

Attracts
Butterflies!

IN-STORE & CONSUMER CARE

LIGHT: indoors, display in bright indirect sunlight. Place outdoor plants in full sun to light shade.

TEMPERATURE: quite tolerant of house temperatures. The optimal indoor temperature for displaying and storing campanula is 15°C (60F) to 20°C (70F). Hardy in zones 3 - 8 when planted outside.

WATER: Campanula prefers moderately rich, well-drained soils. Good drainage will ensure a large display of flowers. Keep the soil moist to the touch at all times, but reduce watering during the winter rest period. Irregular watering and drying can cause bud drop. Avoid standing water.

HUMIDITY: moderate humidity is required, mist Campanulas daily

FERTILIZER: Plants should be well watered before applying fertilizer in the spring and summer months only. Healthy, fertilized plants are more tolerant of insect attacks.

GROOMING: Remove spent blossoms regularly for continuous blooming. Once the flowers have faded, cut them back to encourage re-growth.

Campanula Royal
Botanical Name: *Campanula* spp.
Common Name: Bellflower,
Canterbury bells, Falling stars
