## 6" Pepper

### IN-STORE & CONSUMER CARE

**LIGHT:** Peppers do well with full sun and some partial shade. If the pepper is leaning towards the window, or sun and develops thin stems it is not getting enough light.

**TEMPERATURE:** They are frost tender and grow well indoors. If outside, plant should never be exposed to temperatures below 5°C (55F). Lower temperatures increase the longevity of the colourful fruits.

**WATER:** Peppers do best in a fairly rich and evenly moist soil with good drainage. Keep the soil slightly dry between watering. Never let them sit in standing water.

**FERTILIZER:** Fertilize once a month with a water soluble fertilizer. If you want more fruits and less leaves, then avoid nitrogen rich fertilizers.

**NOTE:** The fruits contain capsaicin, which can cause a burning feeling. Avoid contact with eyes, nose and mouth.

Botanical Name:  
*Capsicum Samba*  
Common Name: Ornamental  
Pepper
