Fragrance

IN-STORE & CONSUMER CARE

LIGHT: stephanotis requires bright light, but keep it protected from direct sunlight. If sitting near a window, protect it from drafts.

TEMPERATURE: avoid sudden changes in temperature. They do best with night temperatures of 18°C (65F) or higher and day temperatures of 23°C (75F) or higher.

WATER: Keep soil evenly moist and mist the leaves. Water sparingly in the winter months. Do not let Stephanotis sit in standing water.

HUMIDITY: humidity levels should be high. This can be achieved in the home by placing the plants on pebble trays. Misting frequently is also beneficial.

FERTILIZER: Fertilize at least once a month. Avoid fertilizing when in flower so the blooms last longer.

GROOMING: In the spring, prune back soft wood to encourage flowering. Remove dead stems, leaves and flowers as they fade. If lower leaves turn yellow, they can be removed without damaging the plants.

ANTHOFLORES®

Botanical Name:
Stephanotis floribunda
Common Name: Madagascar
Jasmine, Wax Flower
